

Additional Readings

Both Anatomy and Physiology are disciplines within the natural sciences, yet many texts tend to neglect the **process** of doing science that has given us our understanding of disciplines and systems. The book below attempts to remedy this problem.

Hagen, J., D. Allchin, & F. Singer. 1996. *Doing Biology*. HarperCollins College Publishers, New York.

To enhance your understanding of “how we know what we know”, you should read the following chapters from Hagen et al. (1996) by the dates of the exams listed below.

midterm I Walter Cannon & Self Regulation in Animals
midterm II Hans Selye, Hormones, & Stress
midterm III Frank Macfarlane Burnet & How Animals Make Antibodies
final exam Christian Eijkman & the Cause of Beriberi

These readings are available in an envelope outside of my office (405 HT). You may borrow these articles long enough to read or copy them. Please return them ASAP so that others may read them. Enjoy!
